

Customer Originated Trace

**Lets you track harassing phone callers through
the phone company**

How to use:

When you get a nuisance call, just depress the "switchhook" and release. Listen for dial tone.

If you've already hung up, just pick up the handset again and listen for dial tone.

Press *57

Listen for the announcement stating if the call has been traced or not. If the call has been traced, the results are printed at the phone company, and if you decide to follow up on the matter you will need to call the police and get a complaint number, then call us with the date and time of call(s) and the complaint number. We will get the information so when the police come in we will have it ready for them.
